	ningococcal disease is a rare but potentially fatal bacterial infection, expressed as either meningitis (infectio he membranes surrounding the brain and spinal cord) or meningococcemia (bacteria in the blood).
(CD acc who	Advisory Committee on Immunization Practices (ACIP) of the U.S. Centers for Disease Control and Prevention (C) recommends that college freshmen (particularly those who live in residence halls or other student living ommodations) be informed about meningococcal disease and the benefits of vaccination, and that students of wish to reduce their risk for meningococcal disease be immunized. Other undergraduate students who wis reduce their risk for meningococcal disease may also choose to be vaccinated.
be the cho the 18 '	der the terms of the College and University Student Vaccination Act, students living in campus housing must immunized against meningococcal disease or sign a waiver that they have received detailed information of risks associated with meningococcal disease and the availability and effectiveness of a vaccine and that the lose not to be vaccinated. The CDC now recommends a booster dose for those 16 years of age who receive ir initial dose at age 11-12. If the initial dose was given at 13-15 years, the booster dose should be given at 16 years of age. If the initial dose was given after the 16 th birthday, no booster is needed, except where there tinuing risk. Refer to Meningitis Vaccine Information Sheet at http://www.cdc.gov/vaccines/hcp/vis/vistements/mening.html
